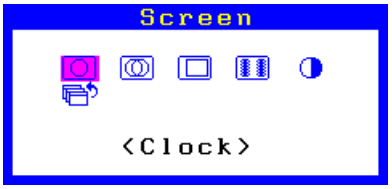
13.4 Using the ScreenManager

• Screen Adjustment



"Screen" adjustments for the LCD monitor should be used in suppressing screen flickering and also for adjusting the screen to its proper position. There is only one correct position for each display mode. It is also recommended to use the ScreenManager function when first installing the display or whenever changing the system.

For convenience, an easy set-up Program installed on the utility disk to assist in the set-up procedure is provided.

Adjustment Procedure

NOTE

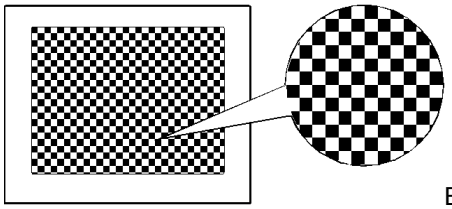
- Allow the LCD monitor to warm up for at least 20 minutes before making adjustments.
- For maximum viewing comfort, it is suggested that the monitor be tilted to eye level.
- Do not continuously press the Control buttons (up, down, right and left buttons) on the control panel, as the adjustment value will change quickly and make it difficult to locate the most suitable adjustment point.

Procedure

Please adjust the screen using the following procedure.

NOTE

- We recommend setting the desktop pattern to that as shown in the diagram below.



Every-other-dot pattern
